

Staff News**PCT with new southern regional manager**

PCT Performance Chemicals GmbH has increased its distribution team with a new regional manager in Baden-Wuerttemberg. Since September 2010 Ralf-Jürgen Fürst (42) contribute his know-how in the fields of consulting and distribution of Retanol screeds. As a technical businessman Ralf-Jürgen Fürst qualifies himself for his new tasks in the PCT with his more than 20 year lasting experience in technical distributions and sales. After finishing his several months lasting trainee program he has replaced Andreas Ulrich as the regional manager in charge in Baden-Wuerttemberg during September of the last year. The studied building engineer Ulrich switched to the office work after five years of working in the distribution field. There he is responsible for special consulting jobs for both architects & planners. Ralf-Jürgen Fürst (42) will be available to any clients and interested parties as technical consultant for PCT products for the screed layers craft. Centerpieces of the product lineup are the Retanols. By means of these screed accelerators the workability of the screed can be set to the point and guaranteed subject to the chosen dosage. Workability is already possible after just three days. Most common applications are 5, 14 or 21 days, respectively. Moreover the company offers a specifically developed cement for screeds with its Eszet No.1. Levelling fills, additives, products for bonding courses as well as for surface and screed finishings complete the range of supply.
